Muhammad Farhan

Software Engineer

PROJECTS

Passport Pic AI

Developed a 10-phase pipeline for passport-size photo generation, incorporating human detection, pose correction, background removal, and blue studio lighting adjustments. Implemented human detection and pose-correction modules to ensure accurate subject positioning. Integrated background removal and blue studio lighting adjustments to produce high-quality passport photos.

Medimart

Implemented end-to-end order processing and payment routing for Medimart e-commerce platform, ensuring accurate receipt generation and order tracking. Designed user, staff, and super-admin interfaces to streamline workflow within the Medimart system. Developed staff application modules to support operational tasks and administrative functions in a pharmaceutical e-commerce environment.

Resume Nova

Designed and implemented Resume Nova, an AI-driven platform that generates customizable resumes and cover letters across multiple templates. Developed an automated font pairing system to enhance visual appeal and maintain consistency across all documents. Integrated a job-finder feature that matches candidate profiles with relevant positions, increasing user engagement. Built an AI assistant that guides users through resume creation, offering real-time suggestions and edits.
